TIPS, GENERAL INFORMATION

5 Gb/s and 2.5 Gb/s Link Speed Support

The Solo10G supports 5 Gb/s and 2.5 Gb/s link speeds when used with NBASE-T compatible (multi-Gigabit) switches, and connected via CAT 5e (or better) cabling.

Solo10G May Become Very Warm While Operating

At times, the Solo10G may become very warm during operation. This is normal and does not indicate a malfunction. Due to the adapter's design, its case may become very warm to the touch while transferring very large files or transferring a large amount of data over an extended period of time. The adapter may also operate at a higher than expected temperature when connected to a long cable run to the switch or storage system. Sonnet designed the Solo10G so that its case radiates heat away from the electronic components inside, ensuring they operate within a safe temperature range.

Audio Video Bridging (AVB) Support

The Solo10G supports AVB when used with AVB-compatible (802.1Qav) switches.
